AD-TV 411 GS

AD-TV 412 GS

## Description

The single or dual channel isolation amplifier of the series AD-TV 411 GS and AD-TV 412 GS 2 is being used for the galvanical isolation and amplification of impressed currents of 0-20 mA or 4-20 mA. The output current is unaffected from the connected load. The output follows the input 1:1. Input, output and supply current are separated galvanically. All channels are isolated from each other galvanically. Through its efficient wide-range power supply unit of the isolation amplifier can be operated over a wide supply voltage range with low level of intrinsic heating.

## Application

Single or dual channel burden amplification and galvanic decoupling of impressed DC current signals.

## Specific characteristics
